Abstract – Social networks play a very vital role in our lives they have an enormous aftermath on our living, they amuse as every now and then they enhance our knowledge. Social networking is part of our daily regime now. But with such advantages there also comes a disadvantage of fake profiles and unwanted, useless things ,In this paper we are coming up with a organization specific social networking site with a modified authentication system which allows only the registered email accounts to create their account in social network ,in this way we allow only people from particular organization to interact with each other and with no unknown people

Key Words: Social networking, Organisation specific, fake accounts, defamation, safe, secure

1. INTRODUCTION

Social network help us in reaching the people we want in very less time, binding people of an organisation becomes easier but there also comes some nuisance created by fake people and fake accounts . we are building a organisation specific social network where each organisation is considered as group and only people in that organisation will be visible and allowed to chat ,post etc.

2. OBJECTIVE

- The overall object is to create safe and secure social network with only recognized people allowed to have accounts.
- To stop the defamation of person or organization due to fake accounts

3. LITERATURE SURVEY

Web-based social networking services allow people to build social networks or social relationships with other people who share similar personal or career interests and activities across political, economic, and geographic borders. Through e-mail and electronic messaging information stored on a computer is exchanged between two users over telecommunication Facebook and other social networking tools are focused attention on sharing information about one's personal life, but social networking also offers the potential to facilitate the exchange of thoughts and ideas and thus informal learning. Scholars in many fields have begun to explore the impact of social- networking sites looking over how such

sites may support issues of identity, privacy, social capital, youth culture, and education. This social networking site is organization-specific; it can be only used by a specific organization for which it is made. Unlike other sites, this site can only be used by users to whom the organization, for which the site is developed, grants the permission. As the organization is the owner of the site, for which it is developed, there will be less chance of illegal activity. In case of any illegal activity happens, as there will be the less number of users it can be easily tracked and caught. The purpose of developing this site is to secure user's private data unlike, other social networking sites where the user's data is sold to other third parties, for the sake of profit, here the possibility of stealing user's data is very less

4. EXISTING SYSTEM

- Social Networking sites allow any random person to create profiles
- People are allowed to add their information about them which are considered true without any proof
- People are assumed to be what they present themselves
- Anyone can create a profile with claiming that he/she belongs to a particular organization or friend of someone and use their account to defame others.
- Hunting forge or fake accounts is a challenging task

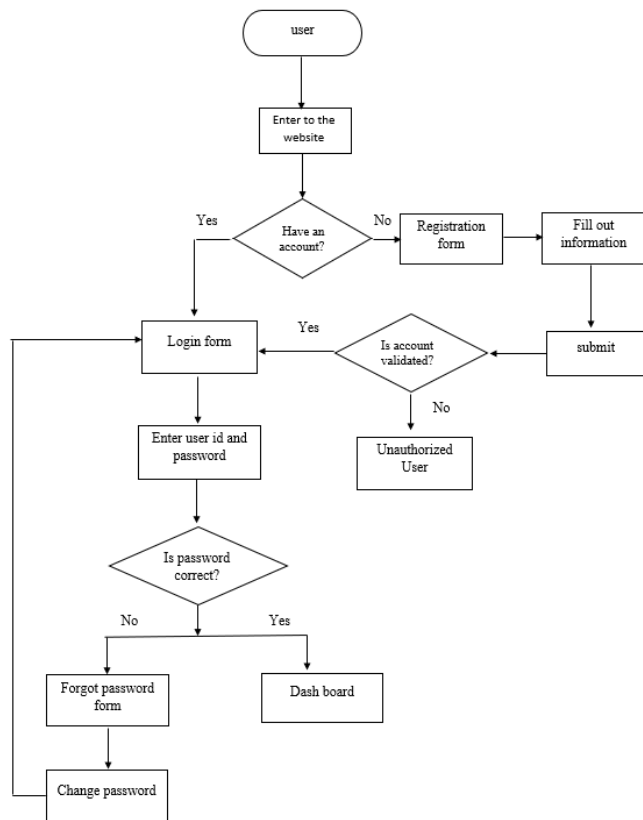

5. PROPOSED SYSTEM

- People whose E-mail accounts are present in organization database will be allowed to use network
- Unknown person and fake account are eliminated
- Trolling or defamation of organization and/or people can be stopped
- People performing malpractices can be easily caught.

6. BLOCK DIAGRAM

The diagram represents the social media flowchart A flowchart is a graphical representation of a process each step in the process is expressed by a different symbol and contains a small description of the process step. The

flowchart symbols are joined together with arrows showing the process flow direction. The social media flow chart is a diagram flow that depicts the detailed steps to use a social medium. Users will find those social networking sites easy to use if there is a flowchart with steps description

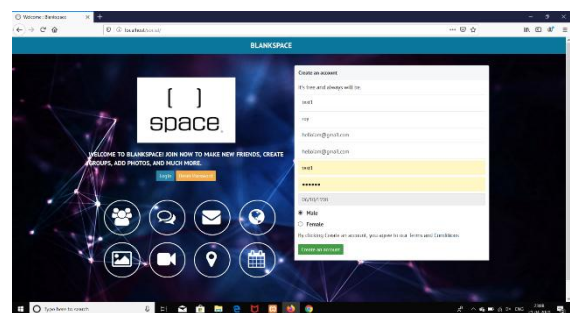

When any user enters into the site he or she immediately encounters the registration page. If the user does not have an account he or she can easily fill out the information in the registration page and register themselves on the site after the admin provides the validation and can enter into the site after providing the login details. If the user already has an account then he can directly enter login details in the login form and can use the site. If the user forgets the password then he has the option of setting a different password. Then after login, the user can easily access varieties of features of this site.
